OUR COMMITMENT

Trust is the foundation of tax work

IRS Pilot is built and operated by IRS Pilot LLC, founded by an Enrolled Agent and NTPI Fellow with nearly two decades of IRS representation experience. We approach security the same way we approach IRS resolution work: methodically, with documentation, and without shortcuts.

01 Encryption Everywhere All data is transmitted over TLS 1.2+ and stored on encrypted infrastructure.	02 Zero Card Storage Payments handled exclusively by Stripe, a PCI-DSS Level 1 provider. We never see your card.
03 Least-Access Principle Account data is accessed only when needed to deliver service or fulfill a support request.	04 No Data Resale We do not sell, rent, or share your tax information with advertisers or data brokers.

01 — ENCRYPTION

How your data moves and rests

Every connection between your browser and IRS Pilot is encrypted with industry-standard TLS. Data at rest lives on managed cloud infrastructure with disk-level encryption enabled by our hosting provider.

- ◆ **In transit:** TLS 1.2 or higher on every page, every API call, every form submission.
- ◆ **At rest:** Database storage encrypted at the infrastructure layer.
- ◆ **Credentials:** Passwords are hashed (never stored in plain text).
- ◆ **API keys:** Third-party credentials stored as environment variables, never in source code.

02 — INFRASTRUCTURE

Where IRS Pilot runs

We build on top of established cloud providers rather than running our own servers. This means our infrastructure inherits the physical security, redundancy, and compliance posture of providers that already serve major financial institutions.

Railway Application hosting (runs on Google Cloud Platform)	Stripe Payments — PCI-DSS Level 1, SOC 1 & SOC 2 certified
Anthropic AI processing — enterprise data handling, no training on inputs	ClickBank Course & digital product fulfillment

Where we stand on formal certifications

We are not currently SOC 2 attested. We're transparent about this because attestation is a specific, audited milestone — not a claim. As our platform serves more tax professionals and firms, pursuing SOC 2 Type I and Type II is on our roadmap. In the meantime, we're glad to walk through our controls with any prospective partner who asks.

03 — AI & DATA USE

How AI handles your tax information

IRS Pilot uses Anthropic's Claude API to power its guidance features. Anthropic's commercial API terms specify that data sent through the API is not used to train their models. We pass only the information needed to answer your specific question.

- ◆ **We do not feed** your transcripts, account history, or platform activity into AI training datasets.
- ◆ **We do not store** AI conversation contents beyond what is necessary to deliver the conversation back to you.
- ◆ **We do not allow** third parties to use your data to build competing products.

04 — ACCESS CONTROLS

Who can see what

Internal access to user data is limited to the founder and specifically authorized contractors, and only when needed to deliver support, investigate an issue, or maintain the platform.

- ◆ **Account access:** You authenticate with a private password unique to your account.
- ◆ **Admin access:** Restricted to a small set of accounts with explicit administrator privileges.
- ◆ **Source code:** Repositories are private and access-controlled.
- ◆ **Production systems:** Deployment credentials are not shared and are rotated when engagements end.

05 — DATA WE COLLECT

What we ask for and why

We collect only what's needed to deliver the service you're paying for. Different features require different inputs.

- ◆ **Account basics:** Name, email, password — to create and secure your account.
- ◆ **Tax situation details:** Information you enter into planning tools — to generate relevant guidance.
- ◆ **IRS notices or transcripts:** Documents you choose to upload — to interpret and respond to them.
- ◆ **Payment information:** Billing details handled by Stripe — we receive only a transaction confirmation.
- ◆ **Usage analytics:** Aggregate behavior data — to understand which features are working.

Your Rights, Plainly Stated

- Request a copy of the data we hold about you
- Request correction of inaccurate information
- Request deletion of your account and associated data
- Export your information in a portable format
- Opt out of marketing communications at any time
- Ask questions about how your data is handled — and get a real answer

06 — INCIDENT RESPONSE

If something goes wrong

In the event of a security incident affecting your data, we will notify you directly via the email address on your account, describe what happened in plain language, explain what data was involved, and outline the steps we're taking. Notification will be made promptly and in accordance with applicable law.

Questions about security or privacy?

Reach the team directly. We respond to security inquiries personally — not through a ticket queue.
